Step One: Remove Air Dam & Fog Light Housing

Put on safety glasses. For easy access to the Fog Light housings, remove the factory plastic air dam. Start by unscrewing the plastic phillips head screws and removing plastic rivets. These are located on the underside of bumper and backside of crossmember as shown in figures 1 & 2. Remove air dam and save all screws & rivets for reinstallation.

Removing the Fog Light:

Starting with the Driver's Side, Locate the back of the driver side Fog light by looking under your vehicle on the back of the bumper (Fig 3). On the back of the Fog lamp housing are four (4) Phillips head screws that secure the housing to the bumper.

From under the vehicle, remove these screws using a Phillips head screw driver (fig 3) and set them aside in a safe place for re-installation.

Step Two: Install Fog Light Euro Guards

Place/install the enclosed O-Rings on the outside of the Euro-Guard as shown in Fig 4. The O-Ring should be on the face of the Euro Guard that will be in contact with the bumper housing.

From under the vehicle, place the driver's side Euro-Guard into the Fog lamp opening on the back side of the bumper. The Bars on the Euro-Guard should be in the vertical position (Fig 5).

A helper can be handy to hold the Euro-Guard in place (Fig 7), Carefully re-install the Fog Lamp housing into the bumper using the original Phillips head screws. Snug the screws (Fig 8) and the

Euro-Guard will be held in position between the light housing and the bumper itself. With driver side now complete, please repeat all steps for the passenger side Fog Light Euro-Guard.

⚠ CAUTION ⚠

ALWAYS CHECK TURN SIGNAL AND LIGHTS FUNCTION BEFORE DRIVING AFTER EURO - GUARD INSTALLATION.

At this point the Fog Light Euro-Guards are installed. After installing any other nearby Euro-Guards, re-install the Plastic factory Air Dam.

Care and Maintenance:

Your Euro-Guards have been designed and manufactured to provide years of use. However, like any product general maintenance is required to keep them looking new. Since the Euro-Guard is located on the front of the vehicle, it is subject to potential rock chips and other debris potentially causing portions of the paint to chip off.

For Textured Finish Euro-Guards:

We recommend using a textured spray paint sprayed on a piece of cardboard and Q-Tip to gently fill in these chips. This will prevent any rust from forming.

For Bright Finish Euro-Guards:

To protect your bright finish Euro-Guards we recommend using a car wax on the parts on a regular basis. This will protect the finish and keep your Euro-Guards looking like new.
