Step One: Access the Inner Fender Area

Put on safety glasses. First, Locate the front of the driver side inner fender well liner directly under the side marker light (Fig 1). Grab the front portion of the fender liner and pull it out over the tab

*on the fender (Fig 2 & Fig3). Then locate the plastic rivet that holds the fender to the light housing located at the end of the fender lip (Fig4). **Use caution to avoid any pinching of your fingers.***

With a small allen wrench or punch, firmly push in the center of the plastic rivet. Note: It will take some force to push this center of the rivet through (Fig 4).

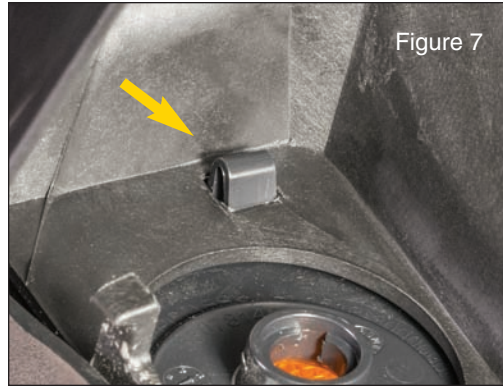

Once pushed through, the outside of the rivet can be pulled out towards the tire & wheel (Fig 5). Save the rivet and pin for re-assembly. With the plastic rivet removed, gently pull back the driver's side inner fender

Step Two: Install Side Marker Euro Guards

liner to locate the bulb assembly (Fig 6). With the inner fender liner pulled back, remove the bulb assembly by twisting one quarter turn and pulling, unlocking it from the Side Marker Housing (Fig 6). With the light bulb assembly removed,

locate the tab on the top of the side marker light (Fig 7). Push the tab down to release the Side Marker light Assembly. Remove the assembly from the fender. Insert the driver Side Marker light Euro-Guard into the open fender

flare from the back side of the flare. The Euro-guard bars should be in the vertical position (Fig 8). Re-install the Side Marker Light into the fender wedging the Euro-Guard into the fender (Fig 9). The Side marker housing should "click" into place.

Then re-install the bulb assembly by twisting a quarter turn back into the side marker housing, as illustrated in Figure 6.

With the Side Marker Light Assembly and bulb assembly installed, push the fender liner assembly back over the plastic rivet head by using the removed Rivet and secure in place. Re-install the inner fender liner and secure the plastic rivet. (Reversing the removal procedure in early steps).

Note: You will need to repeat all steps for to complete installation on the passenger side of the vehicle.

⚠ CAUTION ⚠

ALWAYS CHECK TURN SIGNAL AND LIGHTS FUNCTION BEFORE DRIVING AFTER EURO - GUARD INSTALLATION.

Care and Maintenance:

Your Euro-Guards have been designed and manufactured to provide years of use. However, like any product general maintenance is required to keep them looking new. Since the Euro-Guard is located on the front of the vehicle, it is subject to potential rock chips and other debris potentially causing portions of the paint to chip off.

For Textured Finish Euro-Guards:

We recommend using a textured spray paint sprayed on a piece of cardboard and Q-Tip to gently fill in these chips. This will prevent any rust from forming.

For Bright Finish Euro-Guards:

To protect your bright finish Euro-Guards we recommend using a car wax on the parts on a regular basis. This will protect the finish and keep your Euro-Guards looking like new.
